

## ENGINEERING LABORATORY TECHNICIAN

### *Description*

Airxchange, Inc. a growing Rockland-based manufacturer of HVAC products seeks a Laboratory Technician to support testing and development of energy recovery products. Qualified candidates must be able to set up test procedures from oral and written instructions using mechanical, electronic and electrical equipment as used in HVAC and Materials laboratory. He/she will perform tests or experiments and record data necessary for analysis. Must be familiar with the purpose and operating techniques of equipment and instruments used in the laboratory.

### *Requirements*

Qualified candidates will have:

- High School diploma/GED, two or four year technical degree a plus.
- Mechanical and electrical ability as required to prepare test samples, and build and modify test equipment.
- Ability to work independently, and to record and prepare test data to determine validity of test, and to determine if further testing is necessary.
- Experience in a test laboratory setting a plus.
- Experience with HVAC products a plus.

### *Responsibilities*

The successful candidate will:

- Perform testing necessary to validate performance of energy recovery products
- Record and prepare test results for analysis
- Maintain existing test equipment through calibration processes and repairs
- Participate in design and construction of new test equipment.
- Organize and maintain stock of test samples
- Possess and demonstrate the ability to interact with all levels of project team
